Roadside purchase only

No purchases this quarter but doing a salvage cut on adelgid defoliated hemlock for a non-profit landowner

Cut logs on land I own

Zero for firewood yet demand is high. Very high prices for sugar maple, black cherry and red oak. Red maple is mixed, white wood will spike to 70-100 yet most is poor, average is low

I did not buy any stumpage during this period.

No timber lots purchased at this time

Markets are great. Stumpage prices are going up

Firewood moving well. Poor conditions everywhere in woods.

Not good

No purchase of stumpage for this period

Some mills screaming for logs, paying more money as loggers have been battling poorer ground conditions. Veneer prices still a wonderful thing for many Landowners

Better markets for chips and pulp. Good hardwood pulp markets

No sales during this time frame went out to bid.

I did not buy any standing timber during this time but still appreciate this information. I usually get my logs from land clearers and tree services. My Canadian markets seem very strong and they have been all year. I wish I had a bunch of sugar maple and cherry!
