

Good Oak with Black Oak. No firewood and little other hardwoods. 2 bidders

We need a market for low grade wood, mainly pulp and chips. Without these viable markets the industry will not flourish. We cannot survive on marketing sawlogs alone.

We also have a workforce problem. There are not enough interested, never mind trained young people to enter the workforce. There are few if any young loggers ready to take on our work. Who will manage the forests in the future?

Mill limits to 2-3 loads per week
